

fasthub.ai

AI-native integration & business platform

Fasthub is an enterprise integration platform for organisations that need control and transparency across their entire integration landscape. The difference is that AI isn't a feature here – it's the engine.

Fasthub Integration Platform

50-90% faster integration development

The AI helps to plan, document, build and implement integrations and significantly accelerates implementation.

Fasthub turns months to weeks and weeks to hours

Easy to use

AI knows the context, learns your integration environment and helps you all the way. The system features no-code and low-code views and is easy to learn.

AI agents in process automation

Leverage intelligent agents that handle complex processes, make decisions, use tools and automatically adapt to changing situations.

AI automated migration

AI migrates legacy integrations to a modern platform - no manual redevelopment, and an optimised integration architecture as a result.

AI monitoring & maintenance

AI helps you to track errors, build dashboards, resend messages, analyse the trends and single error causes

Fasthub Business Platform

Fasthub is more than just an integration platform. Packed with powerful features alongside core integration capabilities, it is a full-fledged business platform that unlocks next-level answers to your integration and automation needs.

Smart Forms

AI-built, publicly accessible forms that can be processed using AI, human input, and integration workflows.

AppBuilder

AI enables the efficient creation of interfaces and software around integrations. For instance, a business-grade (non-technical) UI designed to enrich HR data prior to launching an integration workflow.

Datalake

Store and process your data in an S3-compatible data lake. This keeps your data reachable for AI chat, providing both a top-tier data lake solution and a direct AI conversational interface to your data.

Knowledge Base

Archive your key documents in the knowledge base and maximize the value of your data with AI. For example: client and supplier agreements, HR competency profiles, support tickets, etc.

Optional add-ons are free unless you use them.

You pay only for what you use.
